ACM AUTH
Student Chapter

Table of Contents

01 - INTRO

What is machine learning, where is it used, types of machine learning

02 – OUR APPROACH TODAY

What is this workshop about

03 – LETS HAVE SOME FUN

Get your hands dirty with python and machine learning

04 – QUESTIONS & DISCUSSION

Your questions and further discussion

Machine Learning

Subfield of computer science that gives computers the ability to learn without being explicitly programmed.

Arthur Samuel, 1959

A computer program is said to learn from experience E with respect to some class of tasks T and performance measure P if its performance at tasks in T, as measured by P, improves with experience E.

Tom Mitchell, 1997

Applications

Natural Language Process

Analytics

Healthcare

Security

Finance

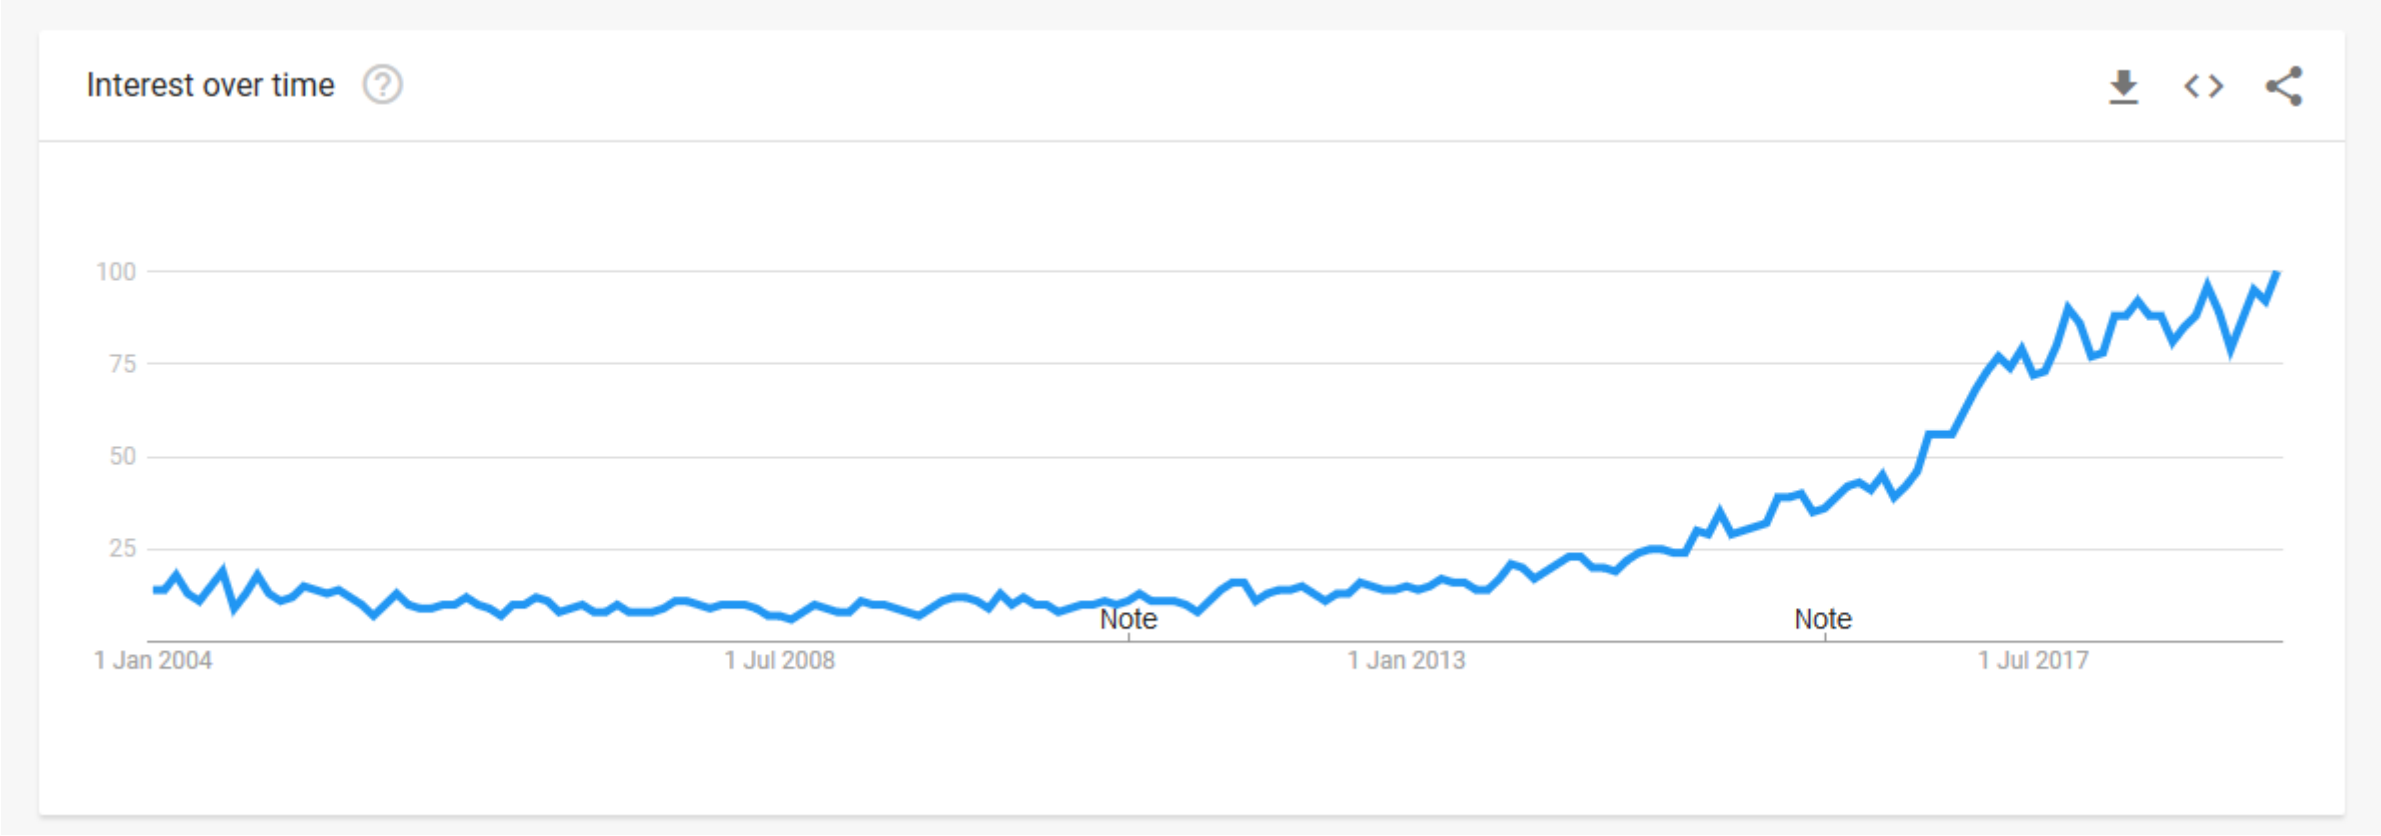
Image Recognition

Automotive

Recommendations

…soon everywhere

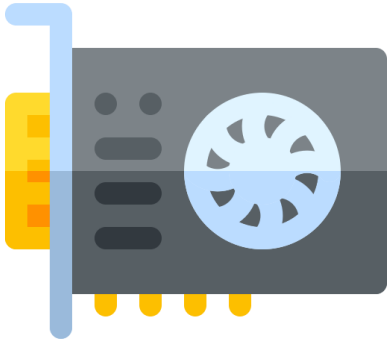
Google Trends: Machine Learning (2004 – Today)



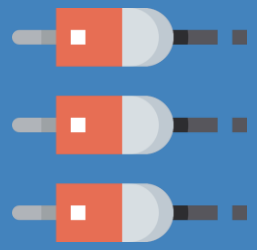
Why now?

Data Growth

Computing Power



Main types of Machine Learning



Supervised Learning
Input variables x, output variable y

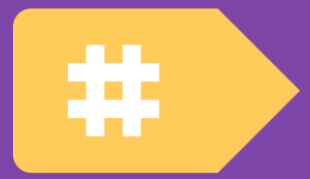
Prediction

Unsupervised Learning
Input variables x

Learn more about the data

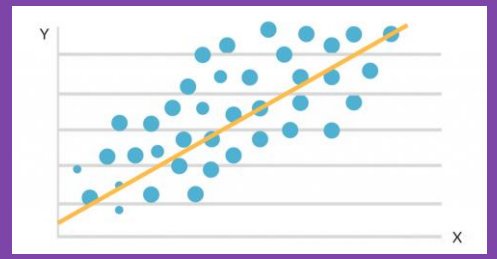
Reinforcement Learning
Agent acting in an environment so as to get a reward

Supervised Learning



Classification

Discrete or categorical output variables



Regression

Numerical or continuous output variables

Our approach today

- An end to end example
- Simple and real
- Python – Google Colab – No Setup
- Regression Problem
- More than just using an algorithm
